Week-2 Lab Task-1 (DDL and DML Operations) Solution

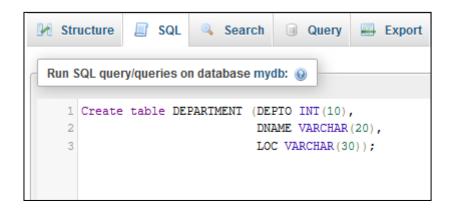

Department

DEPTNO	DNAME	LOC
10	ACCOUNTING	WANDSWORTH
20	RESEARCH	HOUNSLOW
30	SALES	CLAPHAM
40	OPERATIONS	HOUNSLOW

1. Define table "Department" and populate the table with values (given as example) using SQL.

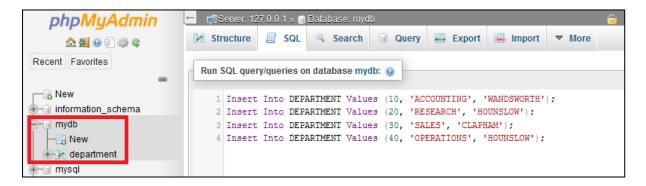

ANS:

Creating Department table:

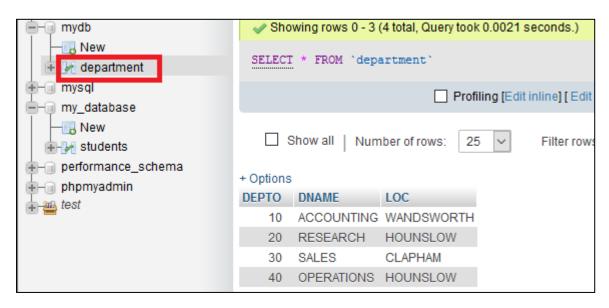

Inserting values in the department table:

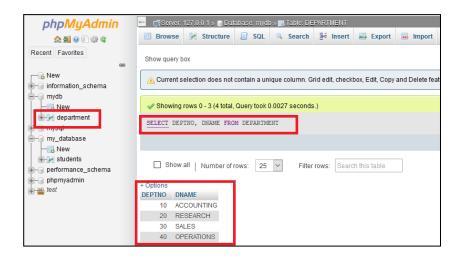

The table "Department":

2. Find the Department numbers and department names from the table.

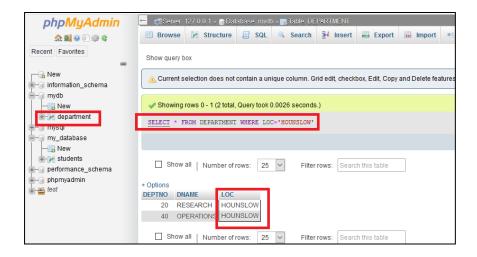

ANS:

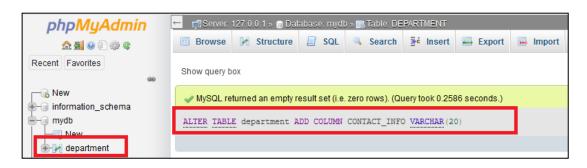

3. Find all the details of the department which is in Hounslow.

ANS:

4. How can you add another attribute to the table to store the contact number of the departments?

ANS:

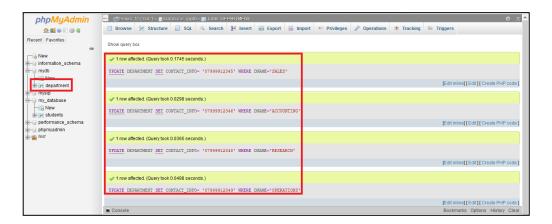

5. In this existing table "Department" you have to store contact numbers for each of the department.

Department of Sales: 07999912345

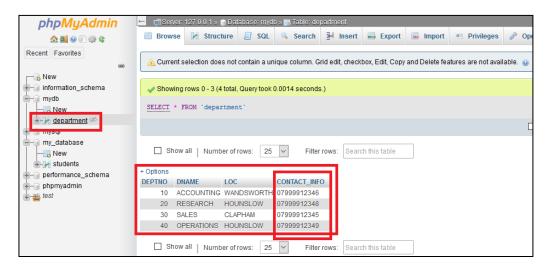

Department of Accounting: 07999912346
Department of Research: 07999912348
Department of Operations: 07999912349

ANS:

The update "Department" table looks like:

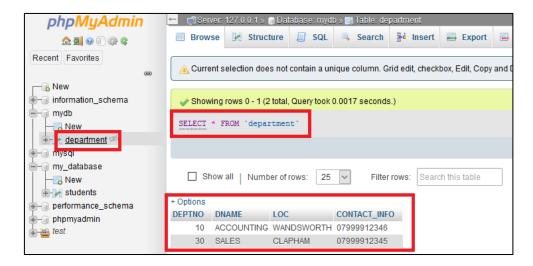

6. Delete all the information of the department where the location is "Hounslow".

ANS:

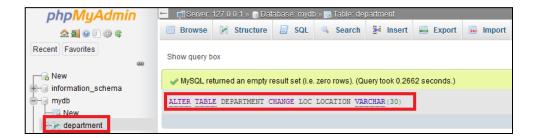

Finally, there is no data is there where the location of the department(s) was in Hounslow:

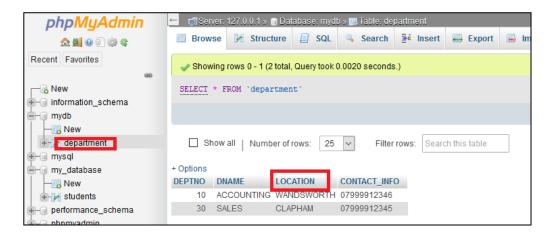

7. How can you change the attribute "LOC" to be presented as "LOCATIONS".

ANS:

The Department table after Alteration:

5
